

Hello!

I am a first-year master student and my education background is in computer science. I am studying the five-years computer science and engineering program, which includes studying a master program in the last two years. I decided to apply for the machine learning master program because my interest in AI was one of the reasons I chose to study computer science in the first place so it was an easy decision for me to make. I have been fascinated by seeing the application of machine learning and how it can be used to make the world a better place and make our lives much easier.

I like that machine learning can be used in many different fields and provides a variety of great opportunities. I think having a career in machine learning is a bit hard when you only have a bachelor's degree in computer science which does not prepare you well for having a good career. I think having a master's in machine learning will definitely make it easier to enter the field. I am also interested in doing a PhD in machine learning sometime in the future after getting some work experience and more knowledge about the field.

I think KTH is a great place for pursuing a master's degree because it provides proper education with high standards and has a great reputation. I have now been studying at KTH for three years so I have an idea of what to expect during the master's. I know that the master's courses will be a bit more intense than the bachelor's ones and will be much more in-depth and much less general. I am expecting to learn more about different fields within machine learning to choose what area I am interested in pursuing a career in. I think there are a great variety of machine learning courses to choose from and I like that we have the freedom to choose many courses because we did not get to choose much during my bachelor's .

I expect myself to be ready to work in machine learning after finishing the master's degree. I am very excited to learn more about the field and get an overview of what areas there are. I am not sure if it is better to choose courses from one area to specialize in or choose courses from different areas to get an overview but right now I am leaning more towards the second option because I don't know what specialization would be best for me.
